# EDGEWATER

FEDERAL SOLUTIONS

## Leading the Way to Mission Success

At Edgewater Federal Solutions, we are mission enablers. Founded in 2002, we're an experienced mid-sized partner with a history of excellence at the Department of Energy, NNSA, and National Laboratories. Explore our ongoing collaborations with M&Os as we jointly propel the missions of our clients forward.

### Sandia National Laboratories (SNL)

Encantado Technical Solutions, a joint venture between Edgewater (Prime) and ECS Federal, provides comprehensive enterprise IT support for Sandia National Laboratories. Leveraging Agile, DevSecOps, and system modernization best practices, Encantado engineers and deploys systems, equipment, websites, and data management tools to assist the lab's personnel and infrastructure at multiple locations across the country. Encantado also supports mission computing services and manages end-user and service-desk support for approximately 14,000 users and 150,000 devices, including the Sandia Systems Operations Center, on a 24x7x365 basis.

### Waste Isolation Pilot Plant (WIPP)

By transforming a team to meet the client's mission objectives, Edgewater continues to improve Waste Isolation Pilot Plant's vast technology environment. Our team supports two WIPP locations by supplying compliant, robust, and dynamic full-lifecycle enterprise IT services. Charged with managing and maintaining over 1,400 users, 400 servers, and 1,200 devices, Edgewater plays a critical role at WIPP by updating infrastructure, leading system integrations and migrations, and supporting the site's cybersecurity initiatives. The team engages in cybersecurity, technical support, application development, network and systems operations, quality assurance, enterprise architecture, and IT project management.

### Los Alamos National Laboratory (LANL)

By placing the right people in the right positions, Edgewater has taken charge of growing LANL's team. Since our contract was awarded in September 2021, we have filled over 35 strategic positions and are engaged in two solutions-based projects.

### National Renewable Energy Laboratory (NREL)

To assist NREL with its financial database, Edgewater developed, implemented, and continues to support the organization's Oracle Hyperion Planning. Through this system, we administer the Lab's custom pricing tool, Essbase cubes operations, new and enhanced integrations, and more.
